Recreate the five (5) html page Wine Site provided as a guide for creating your own “Soda,” “Pop,” “Juice,” or “Water” website. Replace the wine graphics and text with graphics appropriate for your “soda” site, including the index, vineyard and three (3) individual drinks html pages.

1. The five html pages to recreate are listed below:

- a) index.html (three images with new title, Our Vineyard text images)
- b) wine_1.html (glass/can/bottle images, text description, Our Vineyard text)
- c) wine_2.html (glass/can/bottle images, text description, Our Vineyard text)
- d) wine_3.html (glass/can/bottle images, text description, Our Vineyard text)
- e) vineyard.html (company description, map with directions)

2. The secret to timely success with this project is **“Do NOT change any html page names or any image names,”** instead just replace the text or replace the images with text or images appropriate to your three “drinks” using the wine site image names.

3. Do not modify the “wine_styles.css” page unless you really know what you are doing.
